

Attendees

Climate, Migration & Health: With a Focus on Refugee Movements

University of Colorado Population Center
Boulder, Colorado

May 25-26, 2017

Elizabeth Fussell (Brown University) is population scholar interested in migration, the environment, and the life course. Her current research examines population change including migration and displacement caused by Hurricane Katrina.

- <https://www.brown.edu/academics/population-studies/elizabeth-fussell>

Lori Hunter (University of Colorado Boulder) is a sociologist and demographer interested in population-environment connections. Her work has focused primarily on migration and natural resource-based livelihoods, including movement as a response to climate strain.

- <http://www.colorado.edu/ibs/es/hunter/>

Brian King (Pennsylvania State University) is a demographer interested in environmental justice and population health. Much of his work is concentrated on HIV/AIDS and its environmental impact on development in Southern Africa.

- <http://www.geog.psu.edu/people/king-brian>

Stephanie Koning (Wisconsin) is a public and population health researcher interested in healthcare and policy, disease prevention, and marginalization within the public health system. Her previous research project focused on HIV/AIDS and human trafficking.

- <https://pophealth.wisc.edu/stephanie-koning>

Alexis Merdjanoff (NYU) is a scholar interested in sociology and public health. Her research examines the impact of disaster on mental health, and aging, and the life course. She is also a member of the Superstorm Research Lab.

- <https://alexismerdjanoff.com/>

Raya Muttarak (IIASA) is a population research scholar interested in social inequality, differential vulnerability, and environmental change. Her recent research focuses on demographic differential vulnerability: 1) to impacts of natural disasters/climate change; and 2) in ability to respond and cope with consequences of extreme weather events. She is also interested in behaviors toward climate change.

Fernando Riosmena (University of Colorado Boulder) is a demographer with interests in population processes as associated with well-being and development in Latin America. His main research areas are immigrant health and the role of US immigration policy and social, economic and environmental conditions in shaping Latin American migration.

- <http://www.colorado.edu/ibs/pop/riosmena/>

Dan Simon (University of Colorado Boulder) is a Sociology PhD student with interests in the intersection of migration, climate and health. His recent research has explored these connections in the context of Mexico-US migration. Dan is also involved in scholarship on health disparities.

- <http://www.colorado.edu/sociology/daniel-simon>

Emily Skop (University of Colorado, Colorado Springs) is a geographer interested in the intersection of race and ethnicity within international migration and urbanization. Her recent research involves the roles of race and migration in the suburbanization of the USA. She is also the Founding Director of the UCCS Global Intercultural Research Center.

- http://www.uccs.edu/geography/emily_skop.html

Jamon Van Den Hoek (Oregon State) is a geographer and remote-sensing scientist interested in conflict ecology. His research involves the use of spatial modeling and landscape pattern analysis to understand how changes in land cover pattern or land use vulnerability may result from or potentially contribute to the process of conflict at regional or national levels.

- <http://ceas.oregonstate.edu/profile/vandenhoeck/>

Distant participants, members of IUSSP Special Emphasis Panel on Migration-Climate-Health
(will join by SKYPE as schedule allows)

Philippe Bocquier (Université Catholique de Louvain) has expertise in longitudinal analysis, using both retrospective survey data and health and demographic surveillance systems. His research interests range from urban projections to demographic transition and from urban integration to entry into adulthood. His current research focus is on migration and health interrelationships.
